Netgear Orbi RBK852 Setup (WiFi 6 system)

- **Orbi RBR850 router**

- **Orbi RBS850 satellite**

Plug the router into your modem using the WAN port (that yellow one). Power it up. Let it do its thing. The light will go solid white, then start pulsing.

Orbi Mesh Setup with Orbilogin.net

▶ Connect to the Default WiFi

On your phone or laptop, look for the Orbi WiFi name (it's on a sticker on the router). Connect. Yes, the password is also on that sticker. No, don't overthink it.

▶ Go to Orbilogin.net

Fire up a browser and type orbilogin.net. It's not a real website—it's a local address. Make sure you're connected to the Orbi WiFi. If that still doesn't work, try 192.168.1.1.

Make an Account

Netgear wants you to create an account. Fine, do it. Use an email you actually check because if you forget your password later, you'll be screwed without it.

Go to Orbilogin.net

Fire up a browser and type orbilogin.net. It's not a real website—it's a local address. Make sure you're connected to the Orbi WiFi. If that still doesn't work, try 192.168.1.1.

Add Satellites

Once the router is live, it'll ask if you've got satellites. Plug those in wherever you want them. Wait for the LED to go solid blue or green. If it's magenta for too long, it's too far away from the router. Move it closer. Rinse, repeat.

▶ Update Firmware

If you don't, weird bugs will haunt you later. Orbi will usually prompt you, but if it doesn't, hit the "Firmware Update" in the settings.
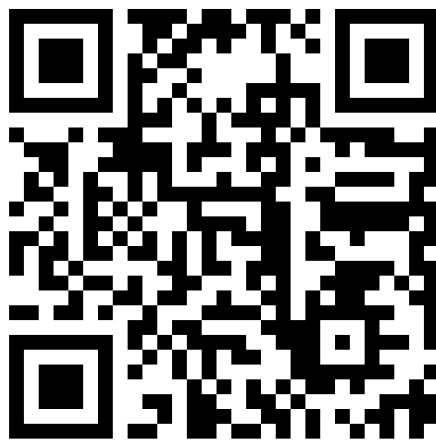

▶ Change Admin Password

- Open a browser on something connected to your Orbi network.

- Type this in the address bar: orbilogin.com (or 192.168.1.1 if that doesn't work). Hit enter. You should see the login screen.

- By default, the username is usually admin. The password is whatever you set during setup (or still the default if you never touched it).

- If you don't know it, check the label on the router or the little card that came in the box.

- Once you're in the dashboard, look up top for Advanced. Click that. Then hit Administration > Set Password.

- You'll see fields for old password, new password, confirm new password. Type it in. Make it strong.

- Check the box that says "Enable Password Recovery" if you don't want to reset the whole system next time you forget.

- Hit Apply. Wait for it to refresh. That's it. You're done.
